"While the decrease from 1 ml to 0.5 ml doesn't sound like a lot, the ease of administration is notable. Not all vaccines are equal. The difference between injecting 0.5 ml and 1 ml when you have a puppy and 2-3 vaccines to give, you barely notice you've injected the volume. With the 0.5 ml vaccine, there was much less vocalization, and much less spilled vaccine. Thumbs-up from us for using NOBIVAC EDGE™ vaccines."

– Dr. Trathan, Oakdale Veterinary Group, Oakdale, CA
