

Power Up Horse Health

With a Five-Day, Five-Dose Regimen of PANACUR® (fenbendazole) POWERPAC

This five-day regimen results in one of the safest, most comprehensive and effective methods to treat a broad spectrum of parasites in a wide variety of horses, including young horses and pregnant mares.

PANACUR® (fenbendazole) POWERPAC is the only product approved to act as a larvicidal treatment for EL₃ (early stage) and L₄ small strongyles¹ and could also be effective against the ivermectin-resistant ascarids so dangerous to foals.²

(fenbendazole)
POWERPAC

PANACUR POWERPAC may be recommended for:

- Moderate-to-high strongyle egg shedders
- Incoming horses before co-mingling with resident horses
- Before starting on a daily dewormer, and once a year while continuing a daily deworming program
- Prior to a performance event for show horses
- The treatment of debilitated or thin horses suffering from internal parasites, horses with chronic diarrhea, recurring colic and chronic weight loss due to suspected parasite infection³

Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitism.
