CLOSTRIDIUM PERFRINGENS TYPE C –
ESCHERICHIA COLI BACTERIN-TOXOID

For use in healthy, pregnant swine as an aid in the prevention of colibacillosis and enterotoxemia in their nursing piglets.

Advantages

- Safe and effective
- Contains four major *E. coli* pilus antigens (K88, K99, F41 and 987P)
- Cell free *C. perfringens* type C toxoid provides broader scours protection and reduced death loss
- Studies demonstrate 70–100% protection against *C. perfringens* type C challenge
- Adjuvanted to heighten and prolong the immune response
- Convenient 2 mL intramuscular (IM) or subcutaneous (SQ) dose

Code: 026131 100 mL
50 doses at 2 mL x 1

ProSystem[®] CE

CLOSTRIDIUM PERFRINGENS TYPE C – ESCHERICHIA COLI BACTERIN-TOXOID

INDICATIONS AND CONTENTS:

For use in healthy pregnant swine as an aid in the prevention of colibacillosis and enterotoxemia in their nursing piglets. A purified, adjuvanted product containing four major *E. coli* antigens (K88, K99, F41, 987P) and *C. perfringens* type C toxoid.

DOSAGE AND DIRECTIONS:

When used alone shake well and administer one 2 mL dose intramuscularly or subcutaneously to healthy pregnant swine at 5 weeks and again at 1–2 weeks before farrowing. In subsequent farrowings, administer one dose 2 weeks before farrowing. CAUTION: DO NOT USE AS DILUENT FOR LIVE VACCINES.

CAUTIONS:

Store in the dark at not over 45°F (7°C). Do not freeze. Use entire contents when first opened; do not save partial contents. Use only in healthy, pregnant swine. Do not vaccinate within 21 days of slaughter. If allergic reaction occurs, treat with epinephrine. Contains thimerosal and polymyxin B as preservatives.
