

 SEQUIVITY[®] IAV-S NA

A NEW WAY TO CUT DOWN FLU

SEQUIVITY IAV-S NA is the first-ever influenza A vaccine that utilizes only the neuraminidase (NA) protein. The result is powerful immunity that reduces lung lesions, nasal shedding and virus amounts in the lungs.¹

FACTS ABOUT SEQUIVITY IAV-S NA:

- Safe to use in growing pigs 3 days of age and older.
- Provides up to an 89.4% reduction in lung lesions when compared to control animals.
- Proven cross-protection against both homologous and heterologous strains.¹
 - › *Effective against the prevalent strains H1N1, H1N2 and H3N2.*
 - › *DOI of at least 12 weeks against H1N1.**
- No risk of vaccine shedding or reversion to virulence.
- Spurs creation of NA antibodies in growing pigs.
 - › *This complements the use of a prescription hemagglutinin (HA) vaccine in sows – available through the SEQUIVITY[®] custom vaccine platform.*

And all with the proven Microsol Diluvac Forte[®] adjuvant that results in an optimal immune response to help keep pigs on track.
