- How is the insulin handled? _____
- Where is the insulin kept? _____
- Is any part of the insulin routine new? (Time? Place? People? Relationship to food? Relationship to exercise?) _____
- What is the patient doing while the insulin is being given? _____

Additional notes:

IMPORTANT SAFETY INFORMATION: VETSULIN[®] and VETPEN[®] are for use in animals only. Dogs and cats known to have an allergy to pork or pork products should not be treated with VETSULIN[®] (porcine insulin zinc suspension). VETSULIN[®] is contraindicated during periods of hypoglycemia. Animals with severe ketoacidosis, anorexia, lethargy, and/or vomiting should be stabilized with short-acting insulin and appropriate supportive therapy before use. As with all insulin products, careful patient monitoring for hypoglycemia and hyperglycemia is essential. Overdosage can result in profound hypoglycemia and death. Progestogen and glucocorticoid use should be avoided. The safety and effectiveness of VETSULIN[®] in puppies, kittens, breeding, pregnant, and lactating dogs and cats has not been evaluated. Keep out of reach of children. Avoid contact with eyes. In case of contact, immediately flush eyes with copious amounts of water for at least 15 minutes. Accidental injection may cause clinical hypoglycemia. In case of accidental injection, seek medical attention immediately. Exposure to the product may induce a local or systemic allergic reaction in sensitized individuals. For complete safety information, refer to the product label.
